Infusion Technologies

Radco Industries offers automated infusion systems for post-formed polymer based products. This process has significant advantages for both color and appearance effects as well as lean manufacturing opportunities. This breakthrough technology, licensed from Bayer MaterialScience, LLC, is available to you without the start up risks typically associated with cutting edge technologies.

- **Capable of achieving a broad range of PMS colors;** band pass filtration for near infrared (NIR) and ultraviolet (U.V.); fluorescent's and photochromics colors.
- **Cost Effective:** fast cycle times while eliminating many of the cost and environmental drawbacks of applied coatings.
- Fast color change capabilities mean **a wide range of color options for the customer** while management gets true Lean, build-to-demand technology.
- Infusion Technology **uses 10% of the color and additive media required by compounding.**
- **Environmentally Responsible:** Processing solvents are totally reclaimed and reused within the system.

Flexible Color Options

Color Over Metal
